

JUSTICE BRUTUS

Frontend Developer & UI Engineer

justicebrutus4@gmail.com · 437-980-5878 · Ontario, Canada · github.com/justicebrutus

► Portfolio (watch or launch each project live): justice-portfolio-nine.vercel.app

PROFESSIONAL SUMMARY

Self-taught frontend developer and UI engineer who ships complete, deployed web applications in **TypeScript and React** — from a SaaS-grade marketing site with a working data console, to real-time audio DSP, AI-driven tooling, and cinematic motion. Comfortable writing the hard parts by hand: custom algorithms, performance-critical canvas rendering, typed data layers, and accessible interfaces (computed WCAG AA) — backed by automated tests and explained in plain language. Strong at pairing polished UI design with hands-on debugging and product-focused problem solving.

TECHNICAL SKILLS

Frontend	JavaScript (ES6+), TypeScript (strict), React, React Router, HTML5, CSS3, Tailwind CSS, Responsive Design, Component Architecture
Browser & UI	Canvas 2D, Web Audio API, Animation (Framer Motion), Accessibility (WCAG AA, ARIA), Semantic HTML, PWA / offline (service workers)
Engineering	Typed domain modeling, Performance Optimization, Debugging, State Management, API Integration (Anthropic API), Error & Failure-State Handling
Testing	Vitest (unit), Playwright (cross-browser E2E), React Testing Library
Design	Figma, Webflow, Squarespace
Tools	Vite, Git & GitHub, Vercel, Chrome DevTools, AI-Assisted Development

SELECTED PROJECTS

Meridian Capital — Marketing Site + Portfolio-Monitor Console

React · TypeScript (strict) · Vite · Tailwind CSS · Vitest · meridian-justice12.vercel.app

- Designed and built a complete, SaaS-grade product for a fictional early-stage investment firm: an editorial multi-page marketing site **and** a working internal "Portfolio Monitor" console — search, multi-filter, sort, pagination, a validated add-company form, and full empty / error states — under one brand.
- Modeled the domain in strict TypeScript behind a typed data layer with localStorage persistence and corruption recovery; computed WCAG AA contrast across the palette and covered the logic with 46 Vitest tests.

Luxen Mix Analyzer — Browser Audio Workbench

JavaScript · Web Audio API · Canvas 2D · luxen-mix-analyzer.vercel.app

- Built a browser-based audio analysis and processing app in vanilla JavaScript with **zero external processing libraries** — using the Web Audio API and Canvas 2D.
- Implemented a radix-2 Cooley–Tukey **FFT** for real-time frequency analysis, plus loudness metering (ITU-R BS.1770-4), phase-vocoder pitch processing, WAV export, stereo-based vocal/instrumental separation, keyboard accessibility, and computed WCAG AA contrast on animated elements.

Carryover — Shift-Continuity Operations App

React · TypeScript (strict) · Vite · Vitest · Playwright · carryover-6mlz.vercel.app

- Built a typed operations app for carrying unresolved conditions across work shifts (observation → handoff → verification → assigned action → proof of closure), with role-based permissions and an immutable audit trail.
- Hand-built product-depth features: a ⌘ command palette, undo/redo time-travel over the record, cross-tab live sync, and an installable **offline PWA** — verified with 25 Vitest tests and a cross-browser Playwright matrix; Lighthouse 100 / 100 / 100.

HALO — Creative-Technology Studio Site

React · Canvas 2D · Framer Motion · halo-studio-pied.vercel.app

- Diagnosed a browser-freezing canvas animation caused by repeated per-particle blur inside the render loop; replaced it with a pre-rendered offscreen glow sprite reused via `drawImage()`, then capped backing resolution and paused animation when the tab is hidden — a full performance pass, not a single fix.

WORK EXPERIENCE

Filament Winding Operator — RS Poles, Tilbury, ON · Jun 2025–Present

- Operate technical production equipment on rotating shifts; trusted with independent troubleshooting within 2.5 months — evidence of fast, self-directed technical learning — while maintaining documented quality and safety standards.

Freelance Web Designer & Developer — Independent · 2024

- Designed and shipped e-commerce sites for two small retail clients — a model-kit / collectibles store and a cosmetics & body-care brand — in **Figma**, **Webflow**, and **Squarespace**, from visual design through launch.

Earlier: Independent Audio Engineer (Luxen, 2024–present); Set-Up Technician (Nartech Metal Products); Property Maintenance (Epstein Property Care).

EDUCATION & PROFESSIONAL DEVELOPMENT

CS50x: Introduction to Computer Science — Harvard University (edX) · Completed 2026

- Algorithms, data structures, and computer-science fundamentals in C, Python, SQL, and JavaScript.

JavaScript Algorithms & Data Structures — freeCodeCamp · Self-paced

High School Diploma — Chatham-Kent Secondary School · 2019
